

NATHAN KIM

(626) 757-7696 | nathank0306@gmail.com | linkedin.com/in/kim-a-nathan | Goleta, CA

EDUCATION

University of California, Santa Barbara | June 2026

GPA: 3.6/4.0

Bachelor of Science in Statistics and Data Science, Technology Management Certification

Relevant Coursework: Machine Learning, Data Science Concepts & Analysis, Probability and Statistics, Design and Analysis of Experiments, Regression Analysis, Applied Stochastic Processes, Bayesian Data Analysis, Linear Algebra

WORK EXPERIENCE

BlueAlpha

San Francisco, CA

Data Science Intern

Jan 2026 – Present

- Developed a synthetic marketing data generator to simulate realistic Marketing Mix Modeling (MMM) datasets with configurable ground-truth parameters such as ROI, adstock decay, and channel saturation effects.
- Implemented statistical and time-series simulation frameworks to generate weekly marketing datasets with seasonality, stochastic noise, and realistic channel-level spending patterns across multiple digital advertising platforms.
- Evaluated MMM model performance by fitting models to synthetic datasets and comparing recovered parameters to known ground-truth values to assess overall model reliability and parameter recovery accuracy.
- Designed benchmarking workflows to rigorously stress-test marketing attribution models and analyze their ability to recover causal channel contributions under controlled experimental conditions and simulated marketing environments.

National Center for Ecological Analysis and Synthesis

Santa Barbara, CA

Data Science Intern

Jul 2025 – Mar 2026

- Designed and implemented reproducible data pipelines and transformation workflows to automate formatting processes and enable scalable ingestion of biodiversity data for long-term conservation research.
- Performed exploratory data analysis (EDA) on large-scale vegetation datasets to identify data quality issues, uncover patterns, and inform downstream modeling, spatial analysis, and machine learning applications.
- Cleaned and standardized heterogeneous vegetation datasets in R (50k+ records), enabling accurate ecological modeling and seamless integration into VegBank, a national open-access research database for plant community data.
- Collaborated with ecological scientists and data managers to troubleshoot data issues, align variable formats with metadata standards, and prepare datasets for predictive modeling, public release, and cross-study comparisons.

PROJECTS

Romus (BroncoHacks Winner)

Apr 2026

Python (FastAPI), MediaPipe, WebSockets, Backboard SDK, Claude, RAG

- Built a real time computer vision system using MediaPipe to extract 33 point pose landmarks (~30 FPS) from live video and detect form breakdowns in weightlifting through a deterministic biomechanics rules engine.
- Designed an multi loop agentic AI system on Claude Sonnet with RAG over retrieval augmented knowledge and per user memory to generate personalized voice cues and post set reports based on user performance and historical data.

Dialed (2x BeachHacks 9.0 Winner)

Mar 2026

Python (FastAPI), Fetch.ai Agents, Supabase, WebSockets, Browser-use, Elevenlabs

- Developed a real-time AI system that monitors social media feeds via browser automation, capturing content and user interaction data to classify manipulative patterns using a multi-agent LLM pipeline and dynamic content analysis.
- Designed a distributed multi-agent architecture (Fetch.ai uAgents) integrating LLM-based classification, session state tracking, and adaptive intervention logic to dynamically filter and modify content feeds in real time.

Investment Performance Tracker

Apr 2025 – Jul 2025

R, RStudio, Shiny, ggplot2, dplyr, lubridate, quantmod, forecast, tseries, zoo, tidyr, reshape2

- Engineered a customizable ARIMA-based time series forecasting pipeline with both conservative and aggressive modes, allowing users to compare outcomes and evaluate model accuracy using RMSE, MAE, and MAPE metrics.
- Automated the full pipeline for data ingestion, return analysis, risk metrics computation, and multi-dimensional visualization, delivering fast insights into volatility, correlation, and cumulative returns for selected portfolios.

TECHNICAL SKILLS

Technologies: SQL, Python (Numpy, Pandas, Scikit-learn, Matplotlib, Pytorch, Keras, TensorFlow), PySpark, R, Git

Certifications: Machine Learning Specialization - Stanford University (Supervised, Unsupervised, Recommender Systems, Reinforcement Learning)
